Junior Cybersecurity Engineer

Profile

Cybersecurity engineering student (ENSIAS) with hands-on experience in DevSecOps, cloud infrastructure hardening, and SOC operations. Built LLM-assisted security tooling with human-in-the-loop validation and aligned technical work with OWASP, ISO 27001 and MITRE ATT&CK. Looking for a 4–6 month internship to help secure AI adoption, modernize infrastructure, and strengthen vulnerability and risk management.

Education

École Nationale Supérieure d'Informatique et d'Analyse des Systèmes (ENSIAS) <i>Engineering Degree – Cybersecurity, Cloud & Mobile Computing</i>	2024 – Present Rabat, Morocco
CPGE Moulay Driss <i>Classe Préparatoire Math-Physics</i>	2022 – 2024 Fès, Morocco

Experience

CHU Hassan II de Fès – Cybersecurity Intern <i>SOC Design, Risk Assessment & AI-Assisted Automation</i>	Jul – Aug 2026 <i>IT & Security Department Fès, Morocco</i>
---	--

- Led a risk-based security diagnostic and deployed an end-to-end SOC stack in an isolated VMware lab (Elastic Security SIEM/EDR, Suricata, pfSense, Shuffle SOAR, MISP, TheHive, Cortex).
- Extended the SOAR workflow with an LLM-based alert triage module (summaries, MITRE ATT&CK mapping, prioritized recommendations), keeping human validation in the loop to cut Tier-1 review time.
- Ran red-team simulations mapped to MITRE ATT&CK to validate existing controls and identify detection/response gaps, then formalized findings into an improvement report for stakeholders.
- Assessed web application exposure using ModSecurity and OWASP CRS, documenting residual risks and prioritized remediation recommendations.

Symolia Groupe – Cybersecurity Intern <i>Cyber Threat Intelligence & Risk Prioritization</i>	Jul – Aug 2025 <i>IT / Security Department Rabat, Morocco</i>
--	--

- Designed and deployed a Cyber Threat Intelligence pipeline integrating CVE data, VirusTotal, Shodan and OSINT sources for continuous monitoring and risk prioritization.
- Correlated threats with the MITRE ATT&CK framework and translated technical findings into client-ready, SOC-oriented reports for decision-makers.
- Developed a real-time threat intelligence dashboard and containerized the platform (Docker) for scalability; adopted by the security team for ongoing monitoring.

Projects

Secure CI/CD Pipeline – DevSecOps Automation <i>Personal project</i>	2026
--	------

- Built an end-to-end DevSecOps pipeline with GitHub Actions integrating SAST (Semgrep), SCA (OWASP Dependency-Check), secret scanning (Gitleaks), container scanning (Trivy), and DAST (OWASP ZAP).
- Developed a Python-based centralized Quality Gate to aggregate findings, apply severity thresholds, and automatically block non-compliant builds, publishing JSON/HTML reports via GitHub Actions.

Private Cloud Hardening – Security Risk Assessment & Benchmarking <i>End of year project (PFA)</i>	2026
--	------

- Conducted a cyber maturity assessment of an OpenStack private cloud against CIS Benchmark controls (Lynis) and turned audit findings into a prioritized remediation and hardening roadmap.
- Designed a defense-in-depth network architecture (DMZ, database and management zones with OVN security groups) to reduce the attack surface.
- Implemented and documented technical controls (SSH hardening, UFW, Fail2ban, ModSecurity/OWASP CRS, Wazuh) and validated them through penetration testing scenarios from Kali Linux.

AWS Cloud Security Monitoring & Automated Incident Response <i>Personal project</i>	2026
---	------

- Designed and deployed a secure, segmented AWS environment (VPC, public/private subnets, ALB, WAF, RDS) using Terraform, applying least-privilege IAM, encryption (KMS), and network isolation via VPC Endpoints.
- Implemented centralized logging and threat detection with CloudTrail, VPC Flow Logs, AWS Config, GuardDuty, and Security Hub for continuous security visibility.
- Built an automated incident response pipeline (EventBridge → SNS/Lambda) that alerts on high-severity findings and auto-quarantines compromised EC2 instances, validated through controlled attack simulations (privilege escalation, port scanning, SQLi/XSS blocked by WAF).

Technical Skills

- **Governance & Risk:** ISO 27001/27005, OWASP, MITRE ATT&CK mapping, CIS Benchmark(Lynis).
- **DevSecOps:** GitHub Actions, Semgrep, OWASP Dependency-Check, Gitleaks, Trivy, Terraform.
- **Offensive & Network Security:** Kali Linux, Metasploit, Burp Suite, Nmap, Wireshark, Suricata, pfSense, ModSecurity
- **SOC & Threat Intelligence:** Elastic Security, Wazuh, Splunk, Shuffle, TheHive, Cortex, MISP, VirusTotal, Shodan
- **Cloud & Infrastructure:** AWS, OpenStack, Docker, VMware, Linux, Windows Server.
- **Programming:** Python, Java, C, JavaScript
- **Languages:** Arabic (Native), French (Fluent), English (Fluent)

Certifications

- **AWS Certified Solutions Architect – Associate** – AWS Training & Certification
- **AWS Certified Cloud Practitioner** – AWS Training & Certification
- **CCNA: Introduction to Networks** – Cisco Networking Academy
- **CCNA: Switching, Routing & Wireless Essentials** – Cisco Networking Academy
